

BEAR FLAG WRITEUP

This flag was really annoying to get, Initially I have tried to change m_health and m_mana and other characteristics, but it seems they are updated from the server, so it didn't work and then I tried to manipulate Bear's functions of arming and damaging, but it didn't work and I tried to set the timer to 0s and it didn't work too, Then I jumped onto the tree and after sometime, the bears shot me down with an AK, then I tried to go underground, it didn't work either. Then I tried to delay the function, but then the connection with server is lost, so I tried to tp into the tree by finding its coordinates.

```
